Summary

I love creating software and building systems that help users interact with and share their experiences. From the time I was in college, I've been interested in programming and systematically figuring out ways to build more efficient and usable systems. I have been coding on my own for the past 3 years mostly in python, while I was working in a cyber shop, and enjoyed it so much that I decided to join Moringa School where I spent 1200 hours over 6 months writing code and building real applications. In addition to what I had learned frameworks such as Angular, flask, and Django were introduced in my time there. All of the activities at Moringa are practical, and project and team-based, so at the end of Moringa School, I worked both as an engineer and Scrum Master on a team of 4 people to build a full -scale application for recipe lovers to easily find local recipes online and shop for the recipes.

I also enjoy meeting new people and hearing new perspectives .Reach out if you want to talk to me about emerging new tech , creating software products or football.

Experience

CEO

Madrocks Networkers

Dec 2017 - Present (3 years 6 months +)

- .Leading the development of the company's short- and long-term strategy
